ivector car hire

PUTS YOU IN THE DRIVING SEAT

Hiring a car should be simple, but the many small parts that make up a contract make it all too easy for the wheels to fall off. That's why you need a system that keeps the nuts and bolts of every contract in place.

ivector car hire is designed to work for you. The system can be customised to give individual users personalised functionality and access rights. It's also managed centrally to ensure you stay in control of the entire system.

When you're intuitive you'll see the benefit.

top of the range

All intuitive systems are quick, efficient and easy to use. Ivector car hire is no exception. It's a functional, flexible and secure system that keeps you in the driving seat.

ivector car hire has an instinctive navigational system that makes inputting data quick and easy. Common fields are populated automatically while a series of intuitive shortcuts allow information such as dates to be entered with a single key stroke.

The easy-to-use functionality of ivector car hire also ensures all users have rapid access to the information they need. For example, any contract can be viewed in an instant using the system's contract viewer.

supplied with excellence

A detailed list of all your suppliers is held on the system and located by country, region, resort and individual depots. You can also record a comprehensive list of all past and present depots.

This can be streamlined to give you quick access to current depots, which can be located by region or airport. There's also the option to review records of past contracts with de-listed depots whenever necessary.

modelled for success

ivector car hire enables you to create a comprehensive list of pre-defined car types, insurance packages, taxes and contract durations that will cover most scenarios. This list can be modified and expanded with new headers and definitions at any time to ensure the system continues to meet your own unique requirements.

Rates are recorded to take into account all the complexities of price bands, sliding scales and local taxes. Insurance packages can be selected from an extensive list including common options such as fully inclusive, additional driver, young driver and so on.

Ivector car hire is also designed to handle a range of supplements that may change from supplier to supplier. This can be calculated at a value or a percentage of the base cost on items such as datebands, locations and free upgrades.

built to perfection

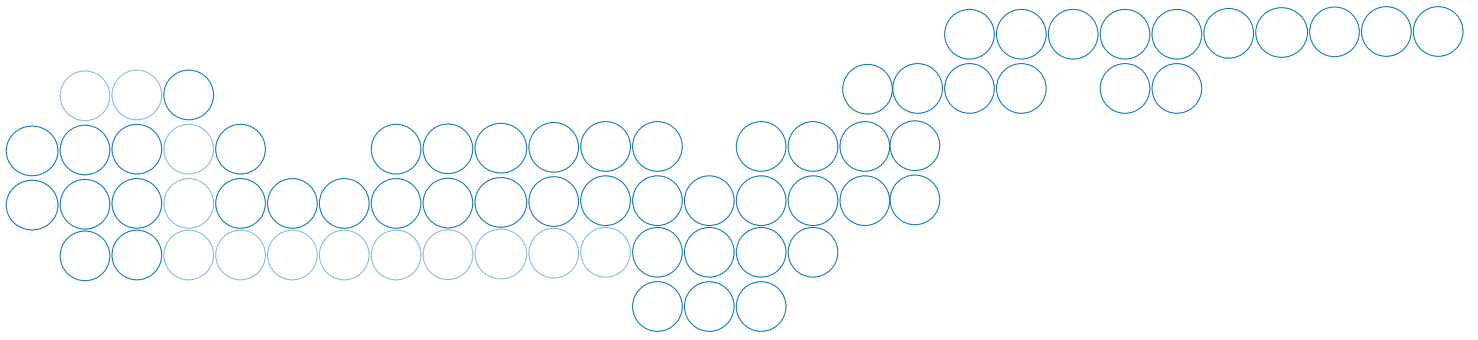

ivector car hire is carefully crafted to ensure data can be entered at maximum speed with minimum key strokes. This feature is further enhanced by the system's easy-to-use, customised access keys. These allow you to create personal shortcuts that speed you around the system and take you to any screen you choose at the touch of a button.

The free text search function operates throughout the system and allows users to personalise their data searches. In addition, it's possible to add notes at any stage of data entry ensuring all relevant details are recorded.

We've also adapted the latest technology to create Adobe PDFs that are quick to transmit, easy to print and universally recognised. The result is a revolutionary new contract print-out that optimises lay-out, cuts down on paper and is easier to read.

ivector car hire is part of the revolutionary ivector family of tour operating software and is fully compatible with ivector accommodation, ivector flights and ivector pricing.

Over 40 years of combined sector experience has gone into creating a seamlessly integrated system that is more functional, flexible and efficient than any of its predecessors. That's why ivector takes tour operating in a new direction and sets the standard for all future systems to follow.

technical overview

- Microsoft Windows 2003 and IIS 6
- Microsoft SQL Server 2000
- Microsoft Internet Explorer 6 or any standards compliant browser
- Microsoft ASP.Net
- PDF output
- intuitiveclasses™

intuitiveclasses™

All our applications are powered by intuitiveclasses™.

We created intuitiveclasses™ by taking Microsoft's .Net development language and improving many of the standard Microsoft Controls and Classes.

The results are surprising. intuitiveclasses™ gives us the power to work with greater efficiency to deliver:

- Faster development and implementation
- Optimum system performance
- Improved returns on your investment

intuitiveclasses™ now powers all of our applications with dramatic effects on browser-based applications. This is ever more important in real world scenarios where WiFi and ADSL are used to connect to client/server based applications or hosted solutions

That's the power of intuitiveclasses™

information and contact details

Intuitive specialises in adapting new technologies to create intuitive software solutions in Manufacturing and Travel.

Our customers choose intuitive because we deliver working systems on time and on budget. That's why we're known as a leading provider of web-based IT applications.

We invest our time creating intuitive software solutions that guarantee the best results for your business.

That's why we're intuitive. We are, are you?
